## Introduction

I'm a computer science PhD candidate focusing on multi-modal human-computer interaction on mobile devices. I have a few publications in CHI, UIST, and IUI. I interned at Meta and Google. I have experience with LLM fine-tuning, CNN training and implementing machine learning models on Android/iOS devices. I've built multiple end-to-end mobile applications with multi-modal input and machine learning backend for enhanced interaction experience. I have 4 years experience of mobile development with Android/iOS, 3 years experience of deep learning, and 1 year experience of Unity development for VR.

---

## Internship experience

### **Student researcher, Google, Mountain View, CA**

Dec, 2022 - May, 2023

Fine tuned LLMs to enable Android settings search to understand natural language queries.

### **Research Intern, Google, Mountain View, CA**

Oct, 2022 - Dec, 2022

(Same as the Google student researcher project above)

### **Research Scientist Intern, Meta, Redmond, WA**

Reduced users' hand movement burden by 30% during gesture typing in virtual reality by utilizing users' eye gaze input. Published a conference paper in IUI 2024 from this internship project.

---

## Education

### **Ph.D., Stony Brook University, USA**

Major: Computer Science. Advisor: Prof. Xiaojun Bi. GPA: 3.78

Graduation date: December 2023.

The CS program is ranked #23 in the US by CSRankings.org

Aug, 2016-present.

### **M.S., Beijing University of Posts and Telecommunications, China**

Major: Information and Communication Engineering. GPA: 3.80

Sep, 2013 - Mar, 2016

### **B.S., Harbin Engineering University, China**

Major: Electronic and Information Engineering. GPA: 3.58

Aug, 2009 - Jul, 2013.

---

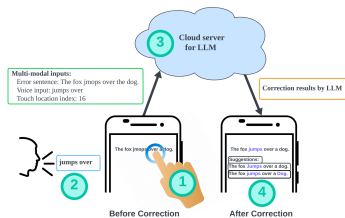

## Programming skills

Python (7 years), Java (3 years), Swift (2 years), Pytorch (2 years), TensorFlow (0.5 year), C# (0.5 year)

Android development (3 years), iOS development (2 years), VR development (0.5 year)

---

## Project experience

### LLM-based text correction with voice and touch input on smartphones

[Project webpage](#)

Developed an end-to-end Android APP for a new LLM-based text correction method with voice and touch input. Fine-tuned FLAN-T5

LLM on Google colab with a semi-synthetic dataset. Served the LLM on a cloud server that communicates with the Android APP for text correction. Carried out a user study and proved that the proposed LLM-based method reduced 15% text correction time from the state-of-the-art method.

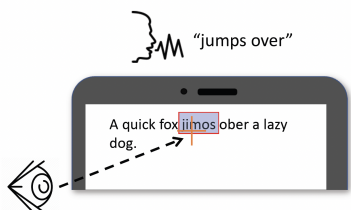

### Language model based text correction and text editing with voice and touch input on smartphones

[Project webpage](#)

Developed an end-to-end Android APP for a new text correction and text formatting method with voice and touch input. Converted voice

input to executable text correction or formatting commands. Implemented a 3-gram language model and word embedding model on Android phones to correct text. Carried out a user study which proved that the proposed method reduced 31% text editing time and 48% text correction time from the iOS Voice Control.

### Eye Gaze and voice based text correction on iPad Pro

[Project webpage](#)

Developed an end-to-end iOS APP for a new text correction method with eye gaze and voice input on an iPad Pro. Proposed a new eye gaze target selection method using Bayesian theory for noisy eye gaze input. Implemented a 3-gram language model on a cloud server

connected with the APP for text correction. Carried out a user study which proved that the Bayesian method reduced up to 23% text correction time from the non-Bayesian method.

## Eye gaze assisted swipe typing in VR

[Project webpage](#)

Developed an end-to-end 3D Unity APP on Meta Quest 2 with C# for a new text input method with eye gaze and wristband input. Reduced 30% hand movement burden from users during swipe typing in VR by utilizing users' eye gaze.

## LLM-based Android search for natural queries

[Slides](#)

Enabled Android settings search to understand natural language queries with LLMs. Fine-tuned the LaMDA LLM with a custom dataset, created a synthetic dataset using LLMs, evaluated the fine-tuned model with real user queries. The fine-tuned model significantly outperforms other search methods such as TF-IDF, sentence encoding, and LLM prompt engineering.

## Selected Publications

### UIST 2021

Zhao, Maozheng, Wenzhe Cui, I. V. Ramakrishnan, Shumin Zhai, and Xiaojun Bi. "Voice and Touch Based Error-tolerant Multimodal Text Editing and Correction for Smartphones." In The 34th Annual ACM Symposium on User Interface Software and Technology (UIST 2021), pp. 162-178. 2021. [Acceptance Rate: 25.05%]

[Project webpage](#),  [Paper](#)

### IUI 2022

Zhao, Maozheng, Henry Huang, Zhi Li, Rui Liu, Wenzhe Cui, Kajal Toshniwal, Ananya Goel et al. "EyeSayCorrect: Eye Gaze and Voice Based Hands-free Text Correction for Mobile Devices." In 27th International Conference on Intelligent User Interfaces (IUI 2022), pp. 470-482. 2022. [Acceptance Rate: 24.5%]
